

Course Information

Course	CSE 480 Web Database Programming (Section 1)
Instructor	Abdus Satter, Adjunct Faculty, Department of Computer Science and Engineering

Project Name

Title Of Project	Job Portal
Student Information	Name: Md. Tanvir Parvez Id: 2017-2-60-088

Project Purpose

A job portal is a website, which helps in the recruitment process by bringing together both the employer and the job-seeking candidate. An employment website is a website that deals specifically with employment or careers. Many employment websites are designed to allow employers to post job. Through a job website a candidate can locate and fill out a job application or submit resumes over the Internet for the advertised position.

This project is aimed at developing an online search Portal for the Placement Details for job seekers. The system is an online application that can be accessed by employee with proper login details. This system can be used as an Online Job Portal for User. User logging should be able to see the jobs posted by the employees and upload their information in the form of a CV to apply for the jobs. Employee can post the job and it provides the employee with all the necessary privileges to access and modify the data intended for them.

Project Goals and Objectives

The goals and objectives of the Online Job Portal are as follows:

1. Employee can post job on our system.
2. Employee can update delete posted jobs.
3. Job seekers can see the jobs posted by the employees and can apply them.

Project Description

This project Online Job Portal has been developed on PHP and MySQL. The main objective for developing this project is to provide an online job search portal for job seekers about opportunities in different companies. It can manage Job Post, Job details etc. This system is very useful for users because they need to submit resumes through their account and all uploaded resumes are visible to employee who provide job opportunities. This project provides many features to manage all the data in very well manner.

The interior database has been selected as MySQL server. The MySQL server was a choice as it provides the constructs of high-level reliability and security. The total front end was conquered using the XAMPP server.

Scope

Online job portal is a web application built in PHP. It provides the candidates ability to register to this application and search for jobs, apply jobs. Each candidate will have their own account with their own home page. On the other hand employee that are willing to publish the jobs for their company can register to the job portal and get their own account created and can post jobs to portal's database.

System User

Admin	<ul style="list-style-type: none"> Can sell all the jobs Can Update and Delete a job. Can see all the employee and their details.
Employee	<ul style="list-style-type: none"> Can Post Job. Can Update and Delete Job. Can see application and download
Job seeker	<ul style="list-style-type: none"> Can See all Jobs Can apply to the job

Database
